ABSTRACT OF THE DISCLOSURE

A bulk bag (12) and rigid fork lift time receiving member (18) combination. The combination includes a bulk bag (12) having a bottom (14) and a peripheral sidewall (16).

5 Two rigid parallel-piped fork lift time receiving members (18) are provided, each having an exterior surface with a tie receiving channel (26) extending across a bottom face (20) of the exterior surface. The fork lift time receiving members (18) are tied with ties (28) to the bottom of the bulk bag 10 (12). The ties (28) are positioned within the receiving channels (26), which protects them from wear as the fork lift time receiving members (18) move across a floor.
